

Why wait? Just tap to open.

Welcome to the smart and simple way for entry into gated communities via most smart devices with internet connectivity including iPhone®, Android™, and Windows Phone®.

Tap2Open is a one of a kind gated community entry system that is **safer, more convenient, and easier to control** than conventional gate entry systems.

Why use Tap2Open?

It's Simple

Once a resident sends an invitation guests can simply tap on a link then tap to open the gate. With just two taps guests are in!

For Residents

Residents can send single or group entrance access from anywhere. Invitations to guests can be sent via **e-mail, text message** or other **electronic means**.

Schedule Invitations

With flexible scheduling, residents are able to control exactly what dates and times guests are allowed to enter the community. Residents can also cancel or update invitations at any time right from their smartphone or computer.

Communities

Residents are managed with our user-friendly, web-based interface. The **management interface** allows community administrators to easily **move-in or move-out residents, view logs, and change passwords**.

Guests

Guests will save time and gas with no need to punch in access codes, wait in long lines, or expose themselves to bad weather to enter the community. All it takes is **one tap to enter** the community when they are within range.

Use the Guest's Smartphone as the Key

No app installation is needed; a single tap opens the invitation sent from the resident via text message, e-mail or web link. **Guests are provided with turn by turn directions and entry instructions** to the community.

Move-Out

The management interface gives administrators an option that **conveniently removes all access to the Tap Open system for residents that move out**. There is no need for the resident to do anything.

Contact

sales@tapopen.com or **561-740-OPEN (6736)** to schedule a demo of the Tap Open system in your community.
